RITA A2 vs N1
top 20 of 149 pathways (padj < 0.05)
Hemostasis
Rho gtpase cycle
Nervous system development
Cell cell communication
Neutrophil degranulation
Signaling by receptor tyrosine kinases
Cell extracellular matrix interactions
Assembly of collagen fibrils and other multimeric structures
L1cam interactions
Regulation of hsf1 mediated heat shock response
Cellular response to heat stress
Hsp90 chaperone cycle for steroid hormone receptors shr in the presence of ligand
Ecm proteoglycans
Hsf1 activation
Non integrin membrane ecm interactions
Attenuation phase
Collagen biosynthesis and modifying enzymes
Hsf1 dependent transactivation
Collagen formation
Extracellular matrix organization
