RITA B6 vs N1
top 20 of 144 pathways (padj < 0.05)
Mrna splicing
Processing of capped intron containing pre mrna
Translation
Signaling by receptor tyrosine kinases
Influenza infection
Metabolism of amino acids and derivatives
Signaling by robo receptors
Neutrophil degranulation
Cellular response to starvation
Eukaryotic translation initiation
Regulation of hsf1 mediated heat shock response
Collagen formation
Nervous system development
Cellular response to heat stress
Extracellular matrix organization
Response of eif2ak4 gcn2 to amino acid deficiency
Non integrin membrane ecm interactions
Hsf1 activation
Attenuation phase
Hsf1 dependent transactivation
