RITA T9 vs N1
top 20 of 155 pathways (padj < 0.05)
Mrna splicing
Translation
Metabolism of amino acids and derivatives
Neutrophil degranulation
Cellular response to heat stress
Regulation of hsf1 mediated heat shock response
Nonsense mediated decay nmd
Regulation of expression of slits and robos
Signaling by robo receptors
Nervous system development
Selenoamino acid metabolism
Cellular response to starvation
Attenuation phase
Influenza infection
Hsf1 dependent transactivation
Hsf1 activation
Extracellular matrix organization
Srp dependent cotranslational protein targeting to membrane
Eukaryotic translation initiation
Response of eif2ak4 gcn2 to amino acid deficiency
