RITA T5 vs N1
top 20 of 64 pathways (padj < 0.05)
Srp dependent cotranslational protein targeting to membrane
Rrna processing
Nonsense mediated decay nmd
Selenoamino acid metabolism
Response of eif2ak4 gcn2 to amino acid deficiency
Eukaryotic translation initiation
Regulation of expression of slits and robos
Mrna splicing
Cdc42 gtpase cycle
Rhoa gtpase cycle
Rac2 gtpase cycle
Rac1 gtpase cycle
Rho gtpase cycle
Cell extracellular matrix interactions
Regulation of hsf1 mediated heat shock response
Cellular response to heat stress
Rhoc gtpase cycle
Hsf1 activation
Attenuation phase
Hsf1 dependent transactivation
